## Datos 2 Guate-hogar

Jean Pierre Mejicanos, Adriana Mundo, Pablo Velasquez

#### Contenido

Frontend
What the project is about

atos

Testing

JMeter

Base de datos

MySQL, Elastic Search

03

**Extras** 

Profiler, Cache, Kafka, Logstash

#### Frontend

Guatehogar

#### Frontend

Guatehogar es una aplicación que busca facilitar la venta/renta de viviendas dentro de Guatemala.

Actualmente se encuentra delimitado a zonas céntricas de la capital.

#### About the project

#### Venta

Formulario de venta sincronizado con página con display para compra.

#### Compra

Lista de viviendas disponibles para comprar sincronizado con información ingresada de formulario de venta.

#### Cita

Crea cita para visitar vivienda

#### Base de datos

Base de datos guarda los datos enviados por parte de formulario venta -> muestras los mismos datos en compra -> permite crear citas en base a esos datos.

Elasticsearch ->no relacional usada para buscar dentro de ciertos campos -> comentarios

#### Distintas partes

#### Register

Registra nuevos usarios y les permite login

#### Cita

Registra citas para visitar vivienda basado en opciones de compra.

#### Distintas partes

#### Venta

Formulario de venta sincronizado con página con display para compra.

#### Compra

Lista de viviendas disponibles para comprar sincronizado con información ingresada de formulario de venta.

#### **Extras**

Entre los extras del proyecto se encuentra incluido:

Profiler, Cache, Kafka, Logstash, Kibana

#### **Profiler**

Se utilizó Werkzeug profiler que muestra resultados en terminal.

Para poder visualizarlo utilizamos snakeviz que muestra gráficas y tablas.

### Cache

Memcache (python-memcached)

#### Kafka / Zookeeper

```
cd flask-app
(base)

JPMRO@DESKTOP-URE5NEK MINGW64 ~/downloads/flask-app (master)

$ docker-compose -f app/kafka-docker-compose.yml up -d

Found orphan containers (kafka03, kafka01, kafka02, app_kafka-manager_1, app_m

ysql_1) for this project. If you removed or renamed this service in your compo

se file, you can run this command with the --remove-orphans flag to clean it u

p.

Starting app_kafka_1 ...

app_zookeeper_1 is up-to-date

Starting app_kafka_1 ... done
(base)

JPMRO@DESKTOP-URE5NEK MINGW64 ~/downloads/flask-app (master)
```

#### Logstash

Pipeline de procesamiento de datos gratuito que ingesta datos, los transforma y envía.

#### Kibana

Kibana es una aplicación frontend que se encuentra sobre el Elastick Stack y proporciona capacidades de visualización.

#### **Jmeter**

Con Jmeter realizamos el testing de pruebas de carga.
